

Landscape Irrigation and Maintenance Remote (LIMR)

Fully compatible with ESP-Modular, ESP-SMT, ESP-LX Modular, STPi and ESP-LX+ Controllers.

The Intelligent Use of Water.™

At Rain Bird, we believe it is our responsibility to develop products and technologies that use water efficiently. By reinventing the way you conserve water, the Landscape Irrigation and Maintenance Remote is yet another example of this philosophy brought to life. Visit www.rainbird.com to learn about our many other efforts.

Application:

The Rain Bird® Landscape Irrigation and Maintenance Remote (LIMR) was designed for usability, performance and reliability, saving you time and money as you maintain efficient Rain Bird system operation and head alignment.

Outstanding Results:

- Maintaining Rain Bird system operation and head alignment is easier and faster than ever because you no longer have to walk to the clock to turn zones on or off. A single crew member can activate zones, blow out systems and perform other winterization or maintenance tasks.
- Install the receiver in seconds with just one hand and operate up to 255 zones.
- Skip to any zone by entering its number. No need to scroll through zones in consecutive order.
- Run a system test, specifying how many minutes, which zone to start with and which zone to end with.
- Two-way communication between the remote and the controller allows remote activity information to be displayed on the handheld device.
- Custom names can be assigned to 20 different receivers for easy identification. Each handheld remote can control up to 128 different receivers simultaneously.
- Operating range up to 1.5 miles (2.4 km) line of sight. (Operating range may be reduced when obstructions are introduced between remote system components.)
